

How do I add a MyPrint Device to my Mac?

To print to the Myprint Mono and Colour printers we must first add the printers to OS X. Select System Preferences from the Apple menu and then click on the Print & Fax option.

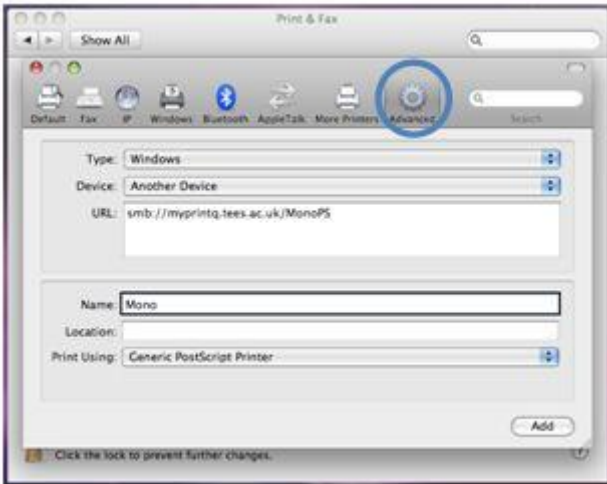

Within the Print & Fax screen click to add a new printer.

Select the Advanced option and fill in the information as shown; then click on Add. This will add the Mono MyPrint printer.

Note: If the Advanced icon is not available Right-Click (or Ctrl-Click) on the toolbar and drag the Advanced icon onto the toolbar, then click on Done.

Add another printer and use the information shown to add the MyPrint Colour printer. Click Add to complete.

Both printers should now be available and you can close Print & Fax and System Preferences.

When printing from an application you will be asked to authorise before printing. Make sure that Registered User is selected and then enter your User ID and password in the Name and Password fields. If you login to the Mac with your own account you can select the Remember this password in my keychain option.

If you share the same account on the Mac with others do not select this option.
