

How to encrypt a single file using 7zip

These instructions will only work using a Windows PC

Navigate to the file you want to encrypt using File Explorer

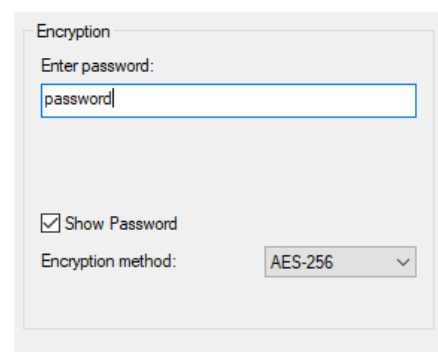

Right click on the file, and select Add to Archive from the drop down menu, and left click.

In the Add to Archive box, find the Encryption section and enter a password. Change the Encryption method from ZipCrypto to AES-256

Click OK to encrypt the file.

When the file is encrypted a new file is created, it will have the same name as the original file but it will have .zip file extension.
