

AV and Assistive Hearing

Teaching Rooms

Teesside University employs two types of assistive hearing systems in selected* teaching rooms across the campus, Infrared and Hearing loop systems.

Hearing loop systems require the user to switch their hearing aid to the “T” position.

Infrared systems require the user to temporarily obtain a compatible necklace from any IT Service Desk or the reception of The Curve. The necklace then becomes a personal hearing loop which can then broadcast to the hearing aid in the “T” position.
